

STAPLE AND NAIL GUIDE

Find the right type of staple and nail  our guide makes it easy to find the model that aligns with your needs.

Printed on every product, you'll find the information you need to match the product with the right staple or nail. On this page you can read how to determine the correct leg length. The tables below contain information on different staple and nail dimensions. The guide on the following three pages shows which staple or nail that goes into which Rapid tool, as well as options for other, non-Rapid brands.

Choose the correct leg length

The thickness and the type of material are determining the length of the staple or nail to be used:

Standard rule

A staple or nail should be 3 times as long as the material to be fixed. Add another 5 mm on the nail.

Hardwood / hard material

For supporting constructions made from hardwood a staple which is twice as long as the material to fix is sufficient. A nail should be 3 times as long as the material to be fixed.

Fine / thin material foil or fabric

To fix fine and thin material a staple which is 4 mm longer than the material is ideal. A round head nail should be 6 mm longer than the material to be fixed.
